

FOR IMMEDIATE RELEASE

CRITICAL PROCESS SYSTEMS GROUP ACQUIRES ENGVT

Critical Process Systems Group (CPS Group) expands consulting engineering capabilities.

Colchester, VT (August 1, 2015) – **Critical Process Systems Group**, a family of manufacturing and design companies focused on providing innovative product solutions to the life science, semiconductor, renewable energy, chemical processing, and general industrial markets, today announced the acquisition of ENGVT, a consulting engineering firm with a broad base of industrial, commercial, and energy project experience. In particular, ENGVT’s multi-disciplinary experience in the design and construction of industrial facilities enhances the CPS Group’s existing product and service offerings with ENGVT’s ability to integrate them into a client’s project contract documents.

Particularly exciting is the integration of CPS Group subsidiary NEHP’s construction productivity improvement products and services with ENGVT’s expertise preparing coordinated, fabrication ready construction documents. The two firms have worked together for fifteen years developing processes and products that reduce the customer’s construction schedule and costs significantly. Working as a team within the CPS Group, they will be the new benchmark for the design and construction process. ENGVT President Jerry Chabot stated “we are excited to become part of the CPS Group and be able to bring our practical, construction logistics focus to the broad range of CPS Group customers early in their construction planning and design process”.

Paul Frascoia, CEO of Critical Process Systems Group stated “we are pleased to add ENGVT to our family of companies; we believe that their proven capabilities across a range of industries will provide enhanced solutions to our existing customer base and also allow our Group Companies access to more customers across more industries through ENGVT’s relationships in the broader market”.
